Rainwater Management (Theory and Practice)

Dr. M.L. Jat, obtained his Ph.D. degree from the MPUAT in 2002 in the field of soil water engineering. He has 30 years teaching, extension and research experience in the field of dryland agriculture, groundwater, rainwater management, resource characterization and drought predication and management. He has published five books and more than 100 research papers and has actively participated in many national and international scientific conferences and seminar. He is the member of several organizations and societies. He is presently working as Professor (S.W.E.) in the All India Coordinated Research Project on Dryland Agriculture at Dryland Farming

Research Station, Arjia, Bhilwara (Rajasthan), MPUAT, Udaipur.

Dr. Om Prakash Gill, obtained his Ph.D. from RAU, Bikaner in 1992. He took over the additional charge as the Vice-Chancellor, MPUAT, Udaipur 2012 to 2015. He has 38 years experience in teaching, research, extension, administration and shouldered many additional responsibilities. He has contributed significantly in specialized areas like Integrated Farming System; Agromet Advisory Services; Climate Change; Organic Farming; Micro Irrigation and Weed Management. The technologies developed by him to achieve sustainable increase in productivity and minimization of pre and post harvest losses due to pests and weeds cover crops like groundnut,

onion, radish, isabgol, pearl millet, wheat, mustard, chickpea, etc. He has published 42 research papers in different international and national journals, more than 300 popular articles in different periodicals and publications, three edited books and delivered more than 120 radio and TV talks.

Dr. B.S. Deora, obtained his Ph.D. (SWC Engg.) MPUAT, Udaipur presently working, Professor at Centre for Natural Resources Management, S.D. Agricultural University, S.K. Nagar, Gujarat (India). He for the last 32 years is actively involved in teaching, research & development, extension and techno-administration. He gave 9 scientific recommendations, published 86 international/national publications/articles and reports; 5 book chapters, 2 books delivered 10 T.V. and 4 Radio programmes to his credit. He also has been a member of the Governing Board, the Academic Councils, various selection committees and panel of examiners of several

organizations/universities; and *Chairman/Member Secretary/Member* of more than 140 scientific/administrative committees.

Dr. Vivek Kumar, is presently working as Assistant Professor in the Department of Agriculture Engineering & Food Technology, Sardar Vallab Bhai Patel University of Agriculture and Technology, Modipuram, Meerut. He obtained his Ph.D. (Agricultural Engineering) from Sardar Vallab Bhai Patel University of Agriculture and Technology, Meerut. He has 12 years experience of teaching UG & PG classes. He guided more than six students of M. Tech and one Ph. D. student as Chairman of advisory Committee. He also worked in International Collaboration with IRRI, Philippines and CIMMYT Mexico and has International exposure also. He has

published two books, four Technical Manuals and more than 30 research papers in International and national reputed Journals.

FOREWORD

The mainstay of economy of India's is agriculture, which is currently exhibiting trends of increasing un-sustainability. Further, rainfed farming will remain the main stay for the livelihood support of millions of small and marginal farmers across the country even after realizing the complete irrigation potential. It faces major challenges imposed by climate change in further expansion of irrigated area in the country. Impacts of climate change in agriculture are witnessed all over the world, but country like India is more vulnerable in view of the high population pressure on agriculture and natural resources with poor coping mechanisms. Though, much of the enormous water resources in the country remain unutilized. Thus, unplanned and unscientific planning of rainwater quite often causes disruptions of hydrologic and environmental regimes at micro and regional level are common to our experiences, such action are eventually lead to break drawn of economic fabrics and social setup. The efficient utilization of rainwater through better management is the core issue if the cropping intensity and production are to be enhanced for livelihood security of dryland farmers. The rainwater management can be implemented efficiency and economically as a viable alternative to on-farm irrigation, drinking and multiple uses, considering the fact that any land anywhere can be used to manage rainwater. This considered being an ideal solution to water scarcity regimes.

The scope of rainwater management is wide and varied. It covers diversified areas such as understanding of dryland engineering, dryland farming and its concept, weather forecasting, rainwater management for drought proofing and mitigation, risk management under drought situation, water harvesting either *in-situ* or *ex-situ* and their efficient

recycling, reduction of water losses, design of water harvesting structures and irrigation systems and the planning operation drainage of recycling system, waste water use in agricultural lands and crop planning, watershed management for better utilization of rainwater. This book deals with all these aspects. It amply serves a widely felt need for a suitable and comprehensive book on rainwater management with emphasis on water harvesting either *in-situ* or *ex-situ*, the analysis of rainfall and water balance, efficient crop planning to enhance productivity, recycling of waste water, watershed management, planning operation of recycling system.

I very much appreciate the efforts made by Drs. M.L. Jat, O.P. Gill B.S. Deora & Vivek Kumar for bringing out this book on "Rainwater Management Theory and Practice" which I hope will be useful for students, teachers and researchers, policy makers and other having interest in the areas related to rainwater management and dryland agriculture.

Prof. U.S. Sharma

Vice-Chancellor
MPUAT, Udaipur (Raj.)

PREFACE

This book is intended as professional textbook for students of agricultural engineering, students of agriculture soil & water engineering. It will also serve as a text for students at the undergraduate and postgraduate levels in civil engineering. In addition to the students, the book will be a valuable reference to professional engineers and agricultural scientists working in the field of rainwater management, dryland farming and irrigation water management.

In addition, the book will also be a valuable reference for the candidates appearing in competitive examinations for the Agricultural Research Service and for the examinations leading to the Associate Membership of the Institution of Engineers (India). Professional training institutions in Soil Conservation and Water Management, Agricultural Polytechnics, Krishi Vigyan Kendras and Rural Institutes and similar other organizations having a programme in water management would find this book useful.

Though written primarily to serve as a text/reference for students of agricultural and engineering institutions and practicing engineers and technologists in developmental organizations in India, it is hoped that the book will be valuable to similar groups in the developing countries.

Rainwater Management, Theory and Practice covers all the areas of rainwater management, precipitation and its analysis, drought indices, weather forecasting, water harvesting, design of water harvesting structure, water losses and control, water lifting devices, irrigation scheduling, planning operation of recycling system, water recycling system related to agriculture. It is a comprehensive treatment of rainwater resources, water balance, drought, measurement of water and field layout, soil-plant-water relationships, water conveyance and control, water application methods and water recycling in salty land, drainage of agricultural lands.

The details regarding design and layout of irrigation practices in the field, including step-by-step procedures, and necessary equipment, are included wherever applicable. Solved examples have been included to emphasize the design principles and facilitate the understanding of the

subject matter in each chapters. Tables, figures and articles are numbered chapter-wise.

A list of important references is given for each chapter. A set of problems for home work is provided for answers at the end of each chapter. Examples and illustrations are provided wherever applicable, make easy the understanding of the subject. The entire book has been written using MKS of weights and measures. Conversion tables of units from one system to another are given in Appendix.

The author is deeply indebted to many societies, dignitaries and organizations for the supply of useful material for inclusion in the manuscript and the assistance at various levels for the preparation of the manuscript.

I express my sincere gratitude to Dr. S. K. Sharma, Zonal Director Research, ARS, MPUAT, Udaipur, Dr. J. K. Balyan, Assistant Professor (Agronomy), Dryland Farming Research Station, Arjia, Bhilwara and Dr. C. M. Yadav, Assistant Professor, Krishi Vigyan Kendra, Bhilwara for extending us valuable help from time to time during preparation of manuscript and also be highly acknowledge direct-indirect cooperation to our all well wishers for their.

The authors would welcome suggestions from the readers to improve the text.

LIST OF TABLES

1.1	Projected water demand for the year 2050	5
1.2	Net and gross food grain availability under different population scenario	8
2.1	Nominal measuring capacities and combinations	49
2.2.	Rainfall at different stations	62
2.3	Computation for missing rainfall	62
2.4	Double mass analysis for example 2.5	63
2.5	Adjusted values at station B	65
2.6.	Annual precipitation for station (x)	66
2.7	Computation for 5-year mean	68
2.8	Computations for plotting, mass curve, dimensional mass curve, distribution graph and intensity	70
2.9.	24 hour rain tora and computation recurrence intervals	74
2.10.	Location of raingauge stations and rainfall	77
2.11	Mean precipitation-isohyetal method	79
2.12	Calculation for depth-area-curve for a hypothetical storm	82
3.1	Annual maximum daily total (24 hours) rainfall at Ootacamund, Tamil Nadu	95
3.2	Computed rainfall for different return periods by Gumble distribution	99
3.3	Computed rainfall for different return periods by Log Pearson Type III Distribution Return	100
3.4	Computed rainfall for different return Log Normal Distribution	102
3.5	Chi-square test	103
3.6	Computation of water balance by Thornthwaite's method (Storage capacity = 100 mm)	111
3.7	Moisture availability periods for different soil types at Pune	114
4.1	Recurrence of drought in India	128

4.2	Recommended indices for drought identification for different agroclimatic zones of India. (Broad Classification)	136
4.3	Recommended indices	136
4.4	Rating of drought indices	138
5.1	Composition of atmosphere	153
5.2	Thermal energy sources at earth surface relative to average solar energy of 263 kilo Langley per year	157
5.3	Different forms of solar radiation	158
5.4	Drymatter production and efficiency of radiation utilization for several crops	159
5.5	Cardinal temperatures for the germination of some important crops	162
5.6	Direction and code for wind direction	170
5.7	Crop losses in India during 1982-83	186
5.8	Possible effects of abnormal weather variables in temperate fruits	186
5.9	Analysis of 15 parameters for LRF of monsoon	199
5.10	Inferences based on signals from 15 parameters for the period: 1951-1987	201
5.11	Long Range Forecast prepared and issued by India Meteorological Department.	203
5.12	Classification of cloud based on sunshine hour	207
5.13	Threshold wind speeds for spraying	208
5.14	Analysis of skill scores of rainfall forecast for Bundelkhand zone of Uttar Pradesh (average of 7 years)	211
5.15	Comparative statements of input cost, output and net profit (Rs/acre) and C: B ratio of AAS farmers over Non-AAS farmers for rice crop	212
5.16	Comparative statements of input cost, output and net profit (Rs/acre) and C: B ratio of AAS farmers over Non-AAS farmers for wheat crop	213
6.1	Effects of tillage implements and depth on maize yield in Alfisols of Bangalore	227
6.2	Effects of tillage implements and depth on maize yield in Alfisols of Bangalore	230
6.3	Effects of different tillage practices on maize yield and water use efficiency	231
6.4	Crop response to primary deep tillage in drought proofing approach under three types of severity	232

6.5	Influence of deep tillage on the profile moisture status	232
6.6	Runoff and soil loss as influenced by no-tillage	233
6.7	Effect of deep ploughing on sorghum	235
6.8	Effect of summer ploughing on yield of seed cotton	236
6.9	Effect of surface residues on runoff and soil loss	237
6.10	Runoff and soil loss from various mulch rates on a silt loam soil with 5% slope	237
6.11	Effect of different tillage and mulching treatments on productivity of maize and wheat crops at Palampur (mean of 3 years)	238
6.12	Effect of surface mulch on the yield of Jowar (kg/ha)	239
6.13	Effect of plastic mulching on yield of cotton and water saving	243
6.14	Effect of mulches on water use, water use efficiency in spring cotton	244
6.15	Average soil temperature between 11 AM and 3 PM during the spring trial (Average Temp. °C)	244
6.16	Grain yield (q/ha) as influenced by mulches	245
6.17	Seed cotton yield (q/ha) as affected by mulch	245
6.18	Economics of different mulches in spring cotton	246
6.19	Water content (g/kg) in sand covered land	247
6.20	Effect of land shaping on the yield of wheat and chickpea in sub-montane Ballawal-Saunkhri and pearl millet in alluvial soils of Agra	249
6.21	Effect of levelling and bunding on yield of maize and sorghum	249
6.22	Runoff and soil loss as influenced by various barriers	250
6.23	Effect of vegetative barriers on the yield of rainfed cotton and sorghum	250
6.24	Effect of ridging and furrowing on <i>kharif</i> crops at Kanpur	251
6.25	Grain yield of sorghum as influenced by organic residue mulch	251
6.26	Effect of ridging on moisture and yield of crop	253
6.27	Long-term effect of land configuration on the grain yield (kg ha ⁻¹) of the <i>kharif</i> crops in vertisols	256
6.28	Effect of land configuration on the grain yield (kg ha ⁻¹) of blackgram in vertisols	257
6.29	Effect of land configuration on the grain yield (kg ha ⁻¹) of pigeonpea and sesame in vertisols	257

6.30	Effect of width of raised beds on the rooting density (mg lit^{-1}) of soybean and blackgram in three seasons	258
6.31	Grain yield (kg ha^{-1}) and water use (cm) of rainfed <i>rabi</i> crops grown after soybean and rice under raised and sunken bed technology (average of 10 years)	259
6.32	Bajra grain yield (kg ha^{-1}) as affected by different land treatments	260
6.33	Effect of mulching on runoff, soil loss and yield of maize at 8% slope	261
6.34	Effect of legume inter-plantation on runoff and soil loss	262
6.35	Efficacy of legume intercropping on runoff and soil loss reduction	262
6.36	Effect of spacing in maize on runoff and soil loss	262
6.37	Effect of sowing dates and methods on grain, fodder and biomass yield	263
6.38	Runoff and soil loss under agroforestry systems	264
6.39	Runoff and soil loss under different grass species	265
6.40	Effect of vegetative barriers on runoff and, soil loss	265
6.41	Effect of different fruit plants on runoff and soil loss at 11% slope	266
6.41	Runoff (mm) and soil loss (t/ha) on different slopes treated with mechanical measures	269
7.1	Indigenous water harvesting systems in different agro-ecological regions of India	283
7.2	Grain and straw yield (t ha^{-1}) of wheat in maize-wheat cropping sequence under minimal water supply from poly-lined tank and 50% of recommended NPK at Palampur	289
7.3	Vege yield In maize-radish-onion-french bean cropping sequence under limited water supply from poly-lined tank at Palampur	290
7.4	Impact of soil conservation measures on water resources development cropping intensity and productivity of crops in Rendhar watershed	290
7.5	Effect of organic residue mulch on yield (q/ha) of <i>kharif</i> crops	291
7.6	Design dimensions of the anicut and the pond	296
8.1	Summary of traditional rainwater harvesting systems in semi-arid region of India	304
8.2	Estimated potential volume of rainwater storage for small-scale water harvesting structures	305
8.3	Surface area, perimeter and storage capacity of different shapes of ponds	312

8.4	Expected water yield in farm pond	313
8.5	Water harvesting efficiency of different surface treatments	313
8.6	Water balance study results for the years 1976-77-78-79 for P.T.	316
8.7	Benefits of nala bunding or check dams	317
8.8	Statement showing evaluation of underground check dam in terms of benefits	319
8.9	Classification of borewells on improvement in yield in Pune Region, Maharashtra	325
8.10	Conservative strategies for runoff water harvesting	326
9.1	Values of rainfall factor (X)	331
9.2	Values of infiltration and vegetative cover factor (Y)	331
9.3	Recommended side slope for different type of soils	332
9.4	Selection criteria for bench terrace system	333
9.5	Calculate the capacity of a pond given the area enclosed by different contours at the site as follows	343
9.6	Water requirements for farm users	344
9.7	Side slopes for preliminary design of earth dams	346
9.8	The seepage rates of different lining treatments	355
10.1	Network of evaporation stations	371
10.1	Seepage rate and seepage rate reduction under different formations of calcareous soil at different heads	382
10.2	Effect of mulching on maize yield, profile water storage at wheat sowing and wheat yield under variable rainfall conditions in the Shiwalik region	388
10.3	For Example 10.4	388
10.4	Effect of antitranspirants on water use efficiency of rapeseed (<i>Brassica campestris</i> var. <i>Brown Sarson</i>)	392
10.5	Data for Example 10.5	401
10.6	Computations of F and f	406
10.7	Values of coefficient 'a'	406
11.1	Characteristics of the length of the growing season	421
11.2	Length of humid period in relation to mean annual rainfall at different stations in India	422
11.3	Mean annual rainfall in relation to crop water requirements at some dry-farming regions across India	423
11.4	Length of effective cropping season in different areas	424

11.5	Sui cropping systems based on rainfall and length of water availability period	425
11.6	Approximate values of daily rates of potential evapotranspiration depending upon the climate and season in India	426
11.7	The length of the water availability period at some of the dry-farming locations in India	426
11.8	Length of the water availability period and suggested cropping system	427
11.9	Effect of surface mulch on the yield of <i>Jowar</i> (kg/ha)	433
11.10	Effect of life saving irrigation on grain and stover yield under different cropping systems	434
11.11	Management options available for different drought situations	436
12.1	Capacities of different manual operated water lifting devices	449
12.2	Capacities of animal water lifting devices	452
12.3	Head loss (due to friction) in galvanized iron pipes meters per 100 m of pipe length	472
12.4	Length of straight pipe in metres giving equivalent resistance of flow in valves and fittings	474
13.1	Discharge through contracted rectangular weirs (L/sec)	509
13.2	Discharge through a 90° V-notch (L/sec)	513
13.3	Dimensions and capabilities of Parshall flumes of various sizes	515
13.4	Free-flow discharge values for Parshall flumes	515
13.5	Discharge through circular orifices	520
13.6	Values of Manning's 'n' for irrigation channel	528
13.7	Permissible velocities for various soil textures	531
13.8	Discharge capacities of siphons at channel crossings using different sizes of concrete pipes Length = 5 m (<i>Discharge, L/sec</i>)	540
13.9	Specifications for standard concrete irrigation pipes	542
13.10	Values of coefficient 'f' in Darcy's equation for pipe flow	545
13.11	Discharge capacities of concrete pipes of different diameters at different head	546
13.12	Discharge from standard gated pipes at heads varying from 30 cm to 150 cm	551
13.13	Friction loss in concrete pipe in metres per 100 m	554
13.14	Head loss through riser valves	556
14.1	Representative properties of soil	574

14.2	Calculations for determining infiltration equation for example 14.1. (Initial water level ($t=0$) = 27.55 cm)	580
14.3	Calculations for determining infiltration equation for example 14.2	582
14.4	Calculations for accumulated depth	584
14.5	Calculations for infiltration rate by inflow outflow measurement of example 14.4 (Inflow = 1 L/sec)	587
14.6	Values of depth of infiltration at different times	596
14.7	Range of available water holding capacity of soils	617
14.8	Available water contents of different soils of India as influenced by soil texture	617
14.9	Permeability classes based on hydraulic conductivity of soil (After Smith and Browning, 1946)	633
14.10	Effective root zone depth of some common crops (grown on very deep, well drained soils)	643
14.11	Approximate magnitudes of water potential in the soil-plant-atmosphere system	644
14.12	Effect of root density on leaf water potential (at 1000 to 1100 hr) of full-grown wheat on sandy-loam soil	653
15.1	Values of crop factor to compute consumptive use from USWB Pan evaporation data (measured or computed)	673
15.2	Variables included in the different formula to estimate crop water requirements	676
15.3	Maximum possible duration of sunlight in the northern hemisphere expressed in units of 30 days of 12 hours each	678
15.4	Normal seasonal consumptive-use coefficient for some irrigated crops	680
15.5	Monthly percentage (p) of the day- time hours of the year for different latitudes	683
15.6	Monthly consumptive use crop coefficients (K) for use in Blaney-Cridle formulae	686
15.7	Correction factors for length and number of days in a month for use in the Thornthwaite formula (Mean possible duration of sunlight expressed in units of 30 days of 12 hr each)	688
15.8	Monthly values of 'i' corresponding to the mean monthly temperature in °C	690
15.9	Extra-terrestrial radiation Q_{Δ} expressed in equivalent evaporation in mm/day	691

15.10	Mean daily maximum duration of bright sunshine hours N for different months and latitudes	693
15.11	Values of a T_a^4 for various temperatures when computing evapotranspiration by the Penman method (after Criddle)	694
15.12	Values of constants, 'a' and 'b' in Penman formula for different places of India	698
15.13	Saturation vapour pressure e_a in mbar as a function of mean air temperature t in 0°C	701
15.14	Values of wind function, $f(u) = 0.27 \left(1 + \frac{u_2}{100} \right)$ for wind run at a 2m height* in km/day	701
15.15	Values of weighting factor $(1 - W)$ for the effect of wind and humidity on ET at different temperatures and altitudes	702
15.16	Values of weighting factor W for the effect of radiation on ET_0 at different temperatures and altitudes	703
15.17	Conversion factor for extra-terrestrial radiation to net solar radiation for a given reflection α of 25% and different ratios of actual to maximum sunshine hours $(1 - \alpha) (0.25 + 0.50 n/N)$	703
15.18	Correction for temperature $f(t)$ on long wave radiation R_{nl}	703
15.19	Correction for vapour pressure $f(e_d)$ on long wave radiation R_{nl}	706
15.20	Correction for the ratio actual maximum bright sunshine hours $f(n/N)$ on long wave radiation R_{nl}	704
15.21	Mean monthly values of extra-terrestrial radiation expressed as equivalent evaporation at 20°C , in mm per month of water	708
15.22	Coefficients for temperature, wind velocity, relative humidity and sunshine percentage	709
15.23	Coefficient of elevation, C_e	711
15.24	Crop coefficient K_c for field and vege crops for different stages of crop growth and prevailing climatic conditions	719
16.1	Optimum soil water regime for different crops in India	731
16.2	Moisture sensitive stages of important crops for irrigation scheduling	736
16.3	Effect of water shortage at different stages of rice on yield	738
16.4	Guide for judging the amount of available soil moisture range	744
16.5	Crop groups according to fraction of soil water depletion (P)	750
16.6	Soil water depletion fraction (P) for different crop groups and maximum evapotranspiration rates (ET_m)	750

16.7	Irrigation depths required for different soils at 50 per cent soil water depletion	759
17.1	Average delta for different crops	769
17.2	Performance criteria of good water recycling system (large)	773
17.3	Water application efficiency in different irrigation method and soil type	778
17.4	Conveyance losses in canals	778
17.5	Comparison of average performance indicator for different options of starting cultivation of groundnut	782
17.6	Comparison of suitability of irrigation methods	784
17.7	Hand tools for control of canal vegetation 800	
17.8	Special characteristics of power moved tools for control of canal weeds	801
17.9	Selected herbicides for control of aquatic weeds	802
17.10	Yield response factor (ky)	815
18.1	Response to supplemental irrigation	829
18.2	Seed cotton yield and water use efficiency in cotton, as affected by irrigation methods	830
18.3	Irrigation and Application efficiencies of various irrigation systems	837
18.4	Suggested maximum application rates (cm/hr) for sprinklers for average soils, slope and tilth	842
18.5	Maximum spacing of sprinklers under windy conditions	842
18.6	Main line sizes for Example 18.4, determined from	
18.7	Effect of crop geometry and Irrigation system on yield of sugarcane (1988-92)	870
18.8	Effect of split application of fertilizer through drip on yield of sugarcane during 1994-95 at Navsari (Gujarat)	872
18.9	Effect of crop geometry and irrigation schedule in drip Irrigation on fruit yield of banana during 1993-95 at Parbhani (Maharashtra)	874
19.1	Wastewater reuse application at different locations	899
19.2	Characteristics of different industrial effluents	905
19.3	Irrigation and nutrient potential of some major industrial wastewater in India	906
19.4	Wastewater categories and their issues/constraints	917
19.5	Possible recycled water grade and treatment	919

19.6	Linking recycled water application and grade- examples on the draft Australian water recycling guidelines	920
19.7	Projected water requirement for various sectors of Indian industries	926
20.1	Equivalent weights of some common constituents	948
20.2	Classification of salt affected soils	950
20.3	Quality of runoff water vis-à-vis ground and river water in the region	951
20.4	Guidelines for evaluation of water quality for irrigation	952
20.5	Water quality rating as proposed by workers in India	955
20.6	Salt tolerance of different crops	955
20.7	Boron tolerance of different crops	956
20.8	Example of irrigation, percolation and salinity levels ($c_1 = 2 \text{ dsm}^{-1}$)	962
20.9	Amounts of gypsum required to replace exchangeable sodium	965
20.10	Gypsum equivalent of some amendments	966
21.1	Recommended bed widths	976
21.2	Values of C in Boston Society Formula	980
21.3	Values of (C) for use in rational formula	982
21.4	Shape factor for Cook's method	985
21.5	Values of (W) for Cook's method	986
21.6	Curve numbers for hydrologic soil cover complexes (for watershed condition II, $I_a = 0.2S$)	988
21.7	Rainfall limits for estimating antecedent moisture conditions (AMC)	990
21.8	Antecedent rainfall conditions and curve numbers (For $I_a = 0.2S$)	992
21.9	Example of rainfall data for drainage design	993
21.10	Recommended runoff percentages for different soil types	994
21.11	Recommended drainage periods for some crops	994
21.12	Recommended side slopes for open ditches	996
21.13	Permissible velocities in non-vegetated channels	996
21.14	Average depth and spacing of tile drains	1003
21.15	Values for the equivalent depth (d) of Hooghoudt ($r_o=0.1 \text{ m}$, d and S in m)	1006
21.16	Desired limits for the tile drains	1014

21.17	Drainage coefficients for tile drains in humid regions	1016
21.18	Recommended values of Manning coefficient (n) for various conduit materials	1017
22.1	Soil and water conservation measures adopted at Tejpura watershed	1056
22.2	Cultivated area under rainfed and irrigation over the years at Tejpura watershed	1057
22.3	Irrigation resources and cropping intensity at productivity of crops Tejpura watershed over period of time	1058
22.4	Seasonwise cropped area at Tejpura watershed (ha)	1058
22.5	Change in ground water at Tejpura watershed over the years	1059
22.6	Area and average productivity of <i>khari</i> f crops at Tejpura watershed	1059
22.7	Area and average productivity of <i>rabi</i> crops at Tejpura watershed	1060
22.8	Crop productivity and annual income of farm families from arable crops at Tejpura watershed	1060
22.9	Forage yield, soil physico-chemical properties and soil and water conservation as influenced by silvipastoral development in barren hillocks at Tejpura watershed after seven years	1061
22.10	Physico-chemical properties of the soil of the cropped area before and after nine years of the watershed treatment at Tejpura watershed	1061
22.11	Animal composition, lactating animals and milk production at Tejpura watershed	1062
22.12	Annual production of food crops, forages, fuelwood, milk and fish and gross income from the produce at Tejpura watershed	1063
22.13	Employment generation over the years at Tejpura watershed	1063
22.14	Overall benefit - cost ratio from direct produce at Tejpura watershed on the basis of 1985-86	1064

LIST OF FIGURES

1.1	Crisis due to poor monsoon (<i>Source: Sawaminathan, 1998</i>)	9
1.2	Population growth and water availability index in India (cum) (<i>Source: Sawaminathan, 1998</i>)	11
1.3	National system for the conservation and sustainable and equitable use of water	12
2.1	The hydrologic cycle	33
2.2	Hydrological cycle – qualitative description	34
2.3	Schematic representation of runoff process	35
2.4	Simplified watershed model	35
2.5	Distribution of average annual water resources of India	38
2.6	Frontal precipitation	40
2.7	Orographic precipitation	41
2.8	Schematic diagram of south-west monsoon	43
2.9	Schematic diagram of north-east monsoon	44
2.10	Onset of monsoon	45
2.11	South-west monsoon rainfall (cm) over India and neighbourhood (<i>Note: International borders are not as per scale and not authenticated by G.S.I.</i>)	46
2.12	Withdrawal of monsoon (<i>Note: International borders are not as per scale and not authenticated by G.S.I.</i>)	47
2.13	Non-recording Symon gauge	48
2.14	Standard rain gauge (ISI)	49
2.15	Tipping bucket gauge	50
2.16	Weighing type rain gauge	51
2.17	Mass curve of rainfall	51
2.18	Floating type recording gauge	52
2.19	Typical Isohyetal map	56
2.20	Location of stations on co-ordinate axes	61
2.21	Double mass curve	64
2.22	Double mass analysis	65

2.23	Dry and wet cycles	67
2.24	Depth-time curve and mass curve	69
2.25	Percentage distribution graph and dimensionless mass curve	69
2.26	Intensity-time graph (Hyetograph)	71
2.27	Intensity-duration-frequency curve	72
2.28	Theoretical probability distribution curve	75
2.29	Thiessen polygon method of assigning weights	76
2.30	Isohyetal method of determining mean precipitation	78
2.31	Typical depth-area curves	80
2.32	Typical depth-area-duration curves	80
5.1	Structure of atmosphere	155
5.2	Gunn-Bellani radiation integration	161
5.3	Approximate distribution of incoming solar radiation during average cloudiness	161
5.4	120° Bend soil thermometer	165
5.5	Influence of soil moisture content and soil texture on thermal conductivity	166
5.6	Points of the compass	168
5.7	Windvane MK II – Details	169
5.8	Cup counter anemometer MK II	171
5.9	Assmann Psychrometer	173
5.10	Sunshine recorder (Campbell-Stokes pattern)	177
5.11	Pan evaporimeter	178
5.12	Measuring Cylinder	179
5.13	Participative climatic risk management processes	188
5.14	Performance of linear regression (LR) and power regression (PR) model during part sample period (1975-1980) and test period (1981-1988). (Source: Gowarikar, <i>et al.</i> , 1989)	202
5.15	Verification of DST model forecast for Peninsula (Source: Thapliyal, 1988)	204
5.16	Weather and crop outlook for the Punjab (Source: Mahvi, 1987)	206
6.1	<i>In-situ</i> moisture conservation practices for black soil	254
6.2	Different types of bench terraces	271
6.3	Cross-section of a contour trench	273
6.4	Layout of contour trench	274
7.1	Depth capacity curve for <i>Hakdar Anicut</i>	292
7.2	Depth capacity curve for <i>Baneda ka Talab</i>	293

8.1	Classification of water harvesting techniques	307
8.2	Classification of water harvesting techniques	307
9.1	Checkdam	337
9.2	Examples of checkdams. Gradient between head of lower weir and toe of next upper weir not to exceed 3% (Source: Rajora, 2002)	338
9.3	Synthetic fibre bags filled with sand for checkdams (Source: Rajora, 2002)	338
9.4 (a, b)	Nalla bunding (Source : Rajora, 2002)	339
9.5	Drop inlet spillway	347
9.6	Drop inlet structure	348
9.7	A typical chute spillway	351
9.8	SAF outlet	352
10.1	Interception loss (Horton)	366
10.2	US Class A Evaporation Pan	368
10.3	IMD Evaporation Pan	369
10.4	Colorado Sunken Pan	370
10.5	Definition sketch	376
10.6	Lysimeter for measurement of soil evaporation	383
10.7	Sketch illustrating watershed leakage	395
10.8	Definition sketch showing relationship between rainfall, infiltration and initial abstractions	397
10.9	Infiltration capacity curve	400
10.10	Plot of f versus t	402
10.11	Plot of f versus t	403
10.12	Plot of t versus $\log(f - f_c)$	404
10.13	Conceptual model of ϕ -index	405
10.14	Computation of ϕ -index	407
11.1	FAO model for determining the length of growing period (LGP)	420
12.1	Scoop	445
12.2	Swing basket	445
12.3	Counter poise lift	445
12.4	Schematic sketch illustrating the principle of working of a counterpoise-bucket lift	447
12.5	Archemedian screw	447
12.6	Chain pump	448
12.7	Hand operated reciprocating pump	449

12.8	Two bucket lift	450
12.9(a)	Persian wheel; (b) Water wheel	451
12.10	Single cylinder reciprocating pump	454
12.11	Hydraulic ram	460
12.12	Hand operated reciprocating pump (Hand boring pump)	462
12.13 (a)	Typical centrifugal pump installation	463
12.13 (b)	Centrifugal pump installed in well	464
12.14	Horizontal centrifugal pump	466
12.15	Types of centrifugal pump casings	466
12.16	Types of impellers	467
12.17	Head capacity curves	477
12.18	Efficiency curves	478
12.19	BHP curves	478
12.20	Matching well and pump characteristics	479
12.21	Alignment of pump shaft	481
12.22	Self priming pump	482
12.23	Turbine pump	485
12.24	Submersible pump	486
12.25	Propeller pump	487
12.26	Schematic diagram of a jet pump	488
12.27	Air lift pump	489
13.1	Volumetric method of water measurement	501
13.2	Cup type current meter	503
13.3	A Dethridge wheel installed at the inlet of a branch water course	505
13.4.	Views of Dethridge meter showing parts details and installation	506
13.5	Weir parts	508
13.6	Rectangular weir	509
13.7	Trapezoidal weir	511
13.8	V-notch weir	512
13.9	Parshall flume	514
13.10	Cutthroat flume	517
13.11	Orifice plate	519
13.12	Parameters of an open channel	525
13.13	Pump stand	548
13.14	Inlet of an underground pipeline water distribution	549
13.15	Outlet valve	550

13.16	Portable hydrant	551
14.1	U.S.D.A. soil textural classification chart (The dotted lines indicate the method of determining the textural class of a soil containing 18% clay, 36% silt and 46% sand. The three lines join at point A which lies within the class 'loam').	566
14.2	Occupation of space in a soil sample	570
14.3	Schematic diagram of the soil as a three-phase system	571
14.4	Variation of infiltration rate and cumulative infiltration with time	573
14.5	Soil moisture profile during ponded infiltration	573
14.6	Relation between accumulated infiltration and elapsed time	579
14.7	Furrow section for computing accumulated infiltration depths in example 14.3	583
14.8	Definition sketch for computing infiltration by volume balance method	589
14.9	Sketch of computation process for average depth of surface storage	591
14.10	Soil moisture content at different stages	603
14.11	Moisture characteristic curves for soils of different textures [Source Ghuman and Prihar (1980)]	605
14.12	Rise of water in capillary tube	609
14.13	Moisture desorption curves as affected by aggregate size [Source Sharma and Uehara (1968)]	612
14.14	Kinds of water in the soil and difference in available moisture content between a sandy and a silt loam soil. (Note that the silt loam contains more than twice as much readily available water) (Adapted from USDA, SCS Handbook Sec. 45, 1964)	615
14.15	Effect of fineness of soil texture on field capacity, permanent wilting point and available water [Source Brady (1984)]	616
14.16	Decrease in hydraulic conductivity k and soil water potential Ψ_{soil} with decrease in soil moisture content (Adapted from Philip, 1957 b)	624
14.17	Tensiometer fitted with vacuum gauge	627
14.18	Tensiometer connected to mercury manometer	628
14.19	Calibration curve of a tensiometer in a sandy loam soil	629
14.20	Moisture characteristics of common soil types (Adapted from USDA, SCS Handbook Sec. 15, 1964)	629
14.21	Electrical resistance block	630

14.22	Schematic diagram of neutron moisture meter consisting of the probe unit scaler	631
14.23	Unsaturated hydraulic conductivity (K) in relation to volumetric soil water content (θ) [Source Rajpal <i>et al.</i> (1977)]	635
14.24	Schematic diagram of water redistribution in soil profile at different times after cessation of water infiltration	636
14.25	Schematic diagram of pattern of stream lines of water flow to a drain installed in a water-logged land	638
14.26	Three stages of evaporation from bare soil as influenced by soil texture and atmospheric evaporativity (Source Personal communication from Dr. S.K. Jalota, Department of Soils, PAU, Ludhiana)	640
14.27	Root zone moisture extraction patter	643
14.28	Net photosynthesis as a function of relative leaf water content (RLW) (Source Shaw and Laing, 1966)	647
14.29	Relationship of plant water potential with relative leaf water content in rice [Source Tomar and Ghildyal (1973a)]	648
14.30	Variations in relative leaf water content and leaf diffusion resistance as influenced by stress at boot stage in oats [Source Sandhu and Horton (1977)]	649
14.31	Diurnal pattern of leaf xylem water potential in wheat under varying soil moisture conditions [Source Singh <i>et al.</i> (1980)]	650
15.1	Lysimeters	667
15.2	US Class A evaporation pan	672
15.3	Cross-sectional view of the sunken screen pan evaporimeter (Source Sharma and Dastane, 1968)	675
15.4	Graphs for modified Blaney Criddle	686
15.6	Slope of saturation vapour pressure <i>v/s</i> temperature curve	696
15.7	Saturated vapour pressure <i>v/s</i> temperature	697
15.8	Correction on calculated ET_0^0 (Penman) for day and night time, wind and humidity conditions	704
15.9	Diagram of crop coefficients	718
15.10	Calculation of crop coefficients	719
16.1	Schematic diagram of soil water status and critical level of soil water	731
16.2	Classification of subsurface water	733
16.3	Characteristics of S-shaped growth curve showing critical stages of water need in crop plants	735

16.4	Schematic representation of yield-irrigation frequency relationship	753
16.5	Design water extraction pattern from effective rooting depths	756
17.1	Typical points of input and output measurement of productivity for different professions	774
17.2	Typical <i>warabandi</i> distribution system	790
17.3	Pipe outlet (non-modular outlet)	810
17.4	Kennedy's gauge outlet (semi-modular outlet)	810
17.5	Modular outlets	811
18.3	Design chart for non-uniform slopes (with design example 18.2).	858
18.4	Submain design chart-slope equal to or larger than 0.5%	860
18.5	Submain design chart-slope less than 0.5% and allowable pressure variation 10%	861
18.6	Main line layout and energy gradient line in Example 18.4.	863
18.7	Nomograph for drip irrigation main line design.	864
18.8	Schematic diagram of adjunct tank system for intensive aquaculture (Source Srivastava, 2007)	886
18.9	Schematic diagram of multiple use system based on lined tank on top areas of watershed in hills and plateau areas (Source Srivastava, 2007)	887
18.10	Schematic diagram of reclamation of waterlogged land between two rivers in mouth of delta (Source Srivastava, 2007)	888
18.11	Schematic diagram of reclamation of saucer shaped waterlogged area	889
19.1	Flow diagram of reuse of application of waste water	902
19.2	Schematic diagram for current management scheme	923
19.3	Past management scheme	923
19.4	Present and past water management agencies in Catalonia	924
20.1	Classification of irrigation water given by USSL staff	953
20.2	Triangular diagram to determine suitability of irrigation water (Kanwar, 1968)	954
20.3	Salt and water inputs and outputs Source Withers and Vipond (1974)	960
20.4	A typical leaching curve	963
20.5	Gypsum requirements	967
21.1	Random drainage system	973
21.2	Parallel field drain system	974
21.3	Parallel open ditch system	974

21.4	Bedding system	975
21.5	Cross slope ditch system	977
21.6	Runoff curves for Cook's method	985
21.7	Curve number method	989
21.8	Number of hours required to remove excess surface water	993
21.9	Typical cross-section of an open ditch	995
21.10	Front end attachments for excavation	999
21.11	A mole plough and mole drain	1001
21.12	Different types of layouts of tile drainage system	1002
21.13	Definition sketch of Hooghoudt's equation	1004
21.14	Curves for finding equivalent depth d (Adopted from USBR)	1006
21.15	Definition sketch for USBR formula	1012
21.16	Spacing of tile drains	1014
21.17	Values of C_d and C_c in ditch conduit formula	1020
21.18	Testing of tiles	1021
21.19	Different bedding conditions of tile drains	1021
21.20	Blind inlet to tile drains	1023
21.21	Surface inlet	1023
21.22	Deep open drains for water table control	1025
22.1	Division of watershed into sub-watersheds for determining priority areas	1033
22.2	Drainage patterns	1035
22.3	Watershed as a system	1039
B-1	Typical free flow rating curve showing actual data points and development of free flow equation	1076
B-2	Generalized free flow ratings of cutthroat flumes	1077
C	Rainfall frequency distribution in India	1081
D	Soil map of India showing hydrologic grouping	1082

CONTENTS

<i>Foreword</i>	v
<i>Preface</i>	vii

1. Introduction	1-31
1.1 Introduction	1
1.2 Water resources	1
1.3 Need for rainwater management	3
1.3.1 Availability	3
1.3.2 Distribution	3
1.3.3 Projection of water demand	5
1.3.4 Indian scenario	6
1.4 Managing Competing Demands	10
1.5 Basic Principles of Rainwater Management	12
1.6 National Water Policy	13
1.6.1 Environment acts	15
1.6.2 Policy issues	16
1.6.3 Prevention & Control of Pollution) Act, 1974 as amended in 1988	17
1.6.4 Water quality assessment authority	17
1.6.5 Environmental and forest clearance of projects	19
1.7 Guidelines for Management and Assessment	20
1.7.1 Environmental monitoring	20
1.7.2 Complexities of environmental impacts	21
1.8 Assessment and Management of Environmental Impacts	23
1.8.1 Minimum flows in the river	23
1.8.2 Pollution control	23

1.8.3 Use of bio-technology in water pollution control	24
1.8.4 Improvement of city water fronts	24
1.9 National Commission for Integrated Water Source Development Plan	25
1.9.1 Any other issues related to integrated water resource development	25
References	30
Exercises	31
2. Precipitation	32-88
2.1 Introduction	32
2.2 Hydrological Cycle	32
2.2.1 Runoff process	34
2.2.2 Conceptual model of hydrological cycle	35
2.2.3 Hydrological equation	35
2.2.4 Hydrological cycle in India	37
2.3 Different Forms of Precipitation	38
2.4 Types of Precipitation	39
2.5 Monsoons	41
2.5.1 South-west monsoon	42
2.5.2 North-east monsoon	44
2.6 Measurement of Point Precipitation	47
2.6.1 Rain gauge	48
2.6.2 Radar measurement of precipitation	53
2.6.3 Satellite measurement of rainfall	53
2.6.4 Errors in precipitation measurements	54
2.7 Analysis of Precipitation	54
2.8 Precipitation Gauge Network	55
2.8.1 Network design	57
2.8.2 Optimum number of rain gauges	58
2.8.3 Estimation of missing data of precipitation	60
2.8.4 Consistency of records	63
2.9 Precipitation Analysis and its Presentation	67
2.9.1 Distribution graph	70

2.9.2	Mass curve and intensity duration curves	70
2.9.3	Dimensionless mass curve	71
2.9.4	Intensity - duration-frequency analysis of point rainfall	72
2.9.5	Station-year method	73
2.9.6	Mean precipitation over a basin	75
2.9.7	Depth-area curves	79
2.9.8	Depth-area-duration curves	80
2.9.9	Probable maximum precipitation	82
	References	83
	Exercises	84
3.	Rainfall and Water Balance Analysis	89-120
3.1	Introduction	89
3.2	Different Types of Statistical Distributions	90
3.2.1	Discrete probability distribution	90
3.2.2	Continuous probability distributions	91
3.3	Return Period or Recurrence Interval	94
3.4	Testing the Goodness of the Fit of the Statistical Distribution	95
3.5	A Case Study	95
3.6	Markov Chain Model	103
3.7	Types of Markov Chains	104
3.8	Utility	106
3.9	To Fit the Markov Model and to Test the Goodness of Fit	107
3.10	Water Balance Analysis	108
3.10.1	Thornthwaite's water balance method	109
3.10.2	FAO method	114
	References	116
	Exercises	118
4.	Drought Indices	121-150
4.1	Introduction	121
4.2	Definitions of Drought	121

4.3	Classification of Droughts	122
4.3.1	Meteorological drought	123
4.3.2	Hydrological drought	123
4.3.3	Agricultural drought	123
4.4	Difference between Aridity and Drought	125
4.5	Climate Change and Drought	126
4.6	Reasons of Drought	127
4.7	Drought Indices	127
4.7.1	Meteorological drought indices	128
4.7.2	Hydrological drought indices	129
4.7.3	Agricultural drought indices	130
4.8	Drought Indices in India	133
4.9	Suitability of Drought Indices for Different Regions	135
4.10	Drought Monitoring Indices	137
4.11	Declaration of Drought by State Government	138
4.12	Prediction of Drought	140
4.13	Drought Management Strategies	141
	References	143
	Exercises	149
5.	Climate, Weather Forecasting and Agro-advisory Services	151-224
5.1	Introduction	151
5.2	Classification of Atmosphere	152
5.2.1	Atmosphere structure	153
5.3	Meteorological Elements and Hours of Observation	155
5.3.1	Hours of observation	156
5.3.2	Weather elements	156
5.4	Classification of Surface Observatories	181
5.5	Weather Abnormalities	183
5.5.1	Floods	184
5.5.2	Droughts	184
5.5.3	Other abnormalities	184
5.6	Weather Forecasting	185

5.7 Indigenous Techniques of Weather Forecasting	187
5.8 Weather Forecasting Organisations	194
5.9 Weather Elements and Time Factor	194
5.10 Modern Weather Prediction	194
5.10.1 Application of short range forecasting in agriculture	196
5.10.2 Application of extended forecast in agriculture	196
5.10.3 Long Range Forecasting (LRF)	197
5.11 Preparation of a Weather Outlook for the Farmers	205
5.12 Agroadvisory Services	209
5.12.1 Farm advisories services	210
5.12.2 Utility of forecast	211
5.12.3 Economic impact assessment of forest	212
5.13 Operational Forecasts	214
5.14 Methods of Weather Forecasting	216
5.14.1 Synoptic method	216
5.14.2 Statistical methods	216
5.14.3 Numerical weather prediction method	217
5.15 Weather Modification	217
5.15.1 Artificial rain making	217
5.15.2 Reduction of wind velocity and its losses	218

14. Soil Plant Water	562-661
14.1 Introduction	562
14.2 Soils	563
14.2.1 Soils classification	563
14.2.2 Physical properties of soil	565
14.2.3 Chemical properties of soil	569
14.2.4 Soil-water relationships	570
14.2.5 Infiltration	571
14.3 Root Zone Soil-water	602
14.4 Soil Water Retention	605
14.4.1 Capillarity	608
14.4.2 Forces of soil water retention	610
14.4.3 Surface adsorption	610
14.4.4 Soil moisture characteristics	612
14.4.5 Soil moisture constants	613
14.4.6 Terminology	618
14.4.7 Soil water movement	620
14.4.8 Moisture movement under unsaturated conditions	623
14.4.9 Water vapour movement	624
14.4.10 Soil moisture	625
14.5 Dynamics of Field-water	635
14.6 Plant-water Relationships	641
14.6.1 Terminology pertaining to crop and water	642
14.7 Water Movement in Soil-Plant-Atmosphere System	644
14.7.1 Terminology pertaining to plant water	645
14.7.2 Indices of plant water stress	646
14.7.3 Diurnal changes in plant water stress	650
14.7.4 Water uptake by plants	651
14.7.5 Evapotranspiration losses	652
14.7.6 Water stress and plant growth	652

17. Planning Operation of Water Recycling System	765-827
17.1 Introduction	765
17.2 Need for Planning of Operation	765
17.3 Causes of Poor Operation of Water Recycling System	766

17.4 Important Terminology Pertaining to Community or Large Water Harvesting System	767
17.4.1 Important terms pertaining to irrigation	768
17.5 Dynamics of Water Harvesting Structures	771
17.6 Main Objectives of Operation and Criteria of Good Performance	772
17.6.1 Main objectives	772
17.6.2 Criteria of good performance of water recycling system	772
17.7 Planning Operation of Recycling System	775
17.7.1 Estimation of future water supply	776
17.7.2 Estimation of water demand	777
17.7.3 Matching supply and demand	778
17.8 Measures to Match Supply and Demand	780
17.8.1 Measures related to the cropping pattern	780
17.8.2 Measures related to water distribution practices	785
17.8.3 Measures related to water fees	786
17.9 Water Delivery System	787
17.9.1 On-demand	787
17.9.2 Semi-demand	787
17.9.3 Canal rotation and free demand	788
17.9.4 Continuous flow	788
17.9.5 Rotational system	789
17.10 Monitoring the Operation	794
17.11 Maintenance	795
17.11.1 Reasons for poor maintenance	795
17.11.2 Main functions of maintenance operation	795
17.11.3 Types of maintenance	796
17.12 Assessment of Water Charges	805
17.13 Canal Outlets	807
17.13.1 Types of outlets	808
17.14 Scheduling of Delivery	812
17.14.1 Rotational supply with limited water	812

17.14.2 Rotational scheduling under full water supply	819
17.15 Farmer's Participation	821
