Preface

The pulse for this book was felt in 1992 when Department of Nematology, CCS Haryana Agricultural University organized a summer institute 'Management of plant parasitic nematodes in different crops'. The participants and also the resource persons from other institutes, highly appreciated the compilation of notes prepared by the faculty of the department to cover practical aspects of the course. As concerns for a similar compilation have been expressed by students and researchers working on different aspects of nematodes at various occasions, it was thought imperative by the editors to come with this book that covers both basic and applied techniques used in Nematology.

This book encompasses the most commonly used methods on basic and applied aspects of Nematology rather than compiling various techniques available in the literature. Emphasis has been given to make techniques comprehensible with sketches and photographs. Illustrated identification keys for common phytophagous nematode genera, species, and races of root knot, cyst and reniform nematodes, etc., have been included to meet the requirement of workers not well versed in nematode taxonomy. The book should prove to be indispensable for both under graduate and post graduate students, and researchers interested in working with the wonderful world of tiny creatures - the plant parasitic nematodes. Different exercises of the book have been written by the expert scientists having more than twenty five years of practical experience in the field of Nematology.

We thank all the authors for their contributions to this book. Photographs of entomopathogenic nematodes kindly supplied by Dr. Mrs. KK Walia of this Department, and of 'Ufra' disease of rice by Dr. Debanand Das, Department of Entomology, Assam Agricultural University, Jorhat are gratefully acknowledged. We also thank Vice Chancellor, CCS Haryana Agricultural University, Hisar for granting us permission to write this book.

Harish K Bajaj RS Kanwar DC Gupta

Contents

Preface

Contributors

Exercise 1.	Collection and preservation of soil and plant samples — Harish K. Bajaj		
	• Collection of soil samples	1	
	 Collection and preservation of plant parts 	3	
Exercise 2.	Isolation of nematodes from soil and plant parts and their estimation — $Harish\ K.\ Bajaj$		
	Isolation and collection of nematodes from soil	4	
	 Isolation and collection of active nematodes and cysts 	4	
	 Isolation and collection of sessile, slow moving or moulting nematodes 	5	
	• Isolation and collection of nematodes from plant parts	5	
	 Isolation and collection of migratory endoparasitic nematodes 	6	
	 Isolation and collection of sedentary endo- and semiendoparasitic forms 	6	
	 Counting nematode population in suspension 	6	
Exercise 3.	Preparation of nematode slides for morphology and taxonomic studies — <i>Harish K. Bajaj</i>	ξ	
	Preparation of temporary mounts	S	
	Killing, fixing and preserving nematodes	10	
	Preparation of permanent toto mounts	10	
	• Preparation of perineal pattern, vulval cone and <i>en</i> face view	12	

iii

υ

Exercise 4.	Measurements of nematodes — Harish K. Bajaj	
	Measurements with an ocular micrometer	15
	Measurements with camera lucida	16
	Measuring nematodes and their body parts	17
Exercise 5.	Gross morphology of nematodes — $Harish\ K.\ Bajaj$	19
Exercise 6.	Identification scheme for common genera of plant parasitic nematodes of India — <i>Harish K. Bajaj</i>	37
Exercise 7.	$\label{eq:common_cyst} \begin{tabular}{l} Identification of common cyst and root-knot nematode \\ species of India — {\it Harish~K.~Bajaj} \end{tabular}$	56
	• Identification of cyst nematodes	56
	• Identification of <i>Meloidogyne</i> Species	61
Exercise 8.	Identification of host races of important nematode species of India — $Harish\ K.\ Bajaj$	64
	• Identification of host races of <i>Meloidogyne incognita</i> , <i>M. arenaria</i> and <i>M. javanica</i>	64
	• Identification of host races of <i>Rotylenchulus</i> reniformis	65
	$ullet$ Identification of host races of $Heterodera\ cajani$	66
	• Identification of pathotypes of <i>Heterodera avenae</i>	66
	• Identification of host races of <i>Heterodera zeae</i>	67
	• Identification of host races of <i>Globodera</i> rostochiensis and <i>G. pallida</i>	68
Exercise 9.	Life cycle studies of nematodes — $Harish\ K.\ Bajaj$	71
	• Embryonic development (Hanging drop method)	71
	Post embryonic development	71
	• Variations with other major nematode groups	72
Exercise 10.	$\begin{tabular}{ll} Histopathology of nematode infected roots \\ P.P.S. \ Baghel \end{tabular}$	76
Exercise 11.	Pathogenicity trials for plant parasitic nematodes $-K.R.\ Dabur$	79
Exercise 12.	Major nematode pests of important crops in India : Morphology, symptomatology and control — Harish K. Bajaj & R.S. Kanwar	82

Contents ix

	Anguina tritici	82
	• Aphelenchoides species	84
	• Ditylenchus angustus	85
	• Heterodera and Globodera species	86
	• Meloidogyne species	88
	Rotylenchulus reniformis	91
	• Tylenchulus semipenetrans	92
	• Radopholus similis	92
	• Hirschmanniella species	95
	• Pratylenchus species	95
Exercise 13.	Assessment of crop losses due to nematodes — R.S. Kanwar & Harish K. Bajaj	97
	• Estimation of avoidable losses in an infested field	97
	• Estimation of losses in a geographical area	98
Exercise 14.	In vitro screening of chemicals against nematodes — I.J. Paruthi	101
	• Mortality Test	101
	Hatching Test	102
Exercise 15.	Testing of chemicals against plant parasitic nematodes by different methods in pots and field — $R.K.\ Jain$	104
	Seed soaking method	104
	• Seed dressing method	105
	Bare root-dip method	106
	Soil application as nursery bed treatment	107
Exercise 16.	Testing phytotherapeutic substances for nematode control — $R.S.\ Kanwar$	110
	• Evaluation of plant extracts for their toxicity against root-knot nematode	110
	• Evaluation of efficacy of plant parts for root-knot nematode control	111
Exercise 17.	Screening of germpalsm for resistance against important phytoparasitic nematodes — $R.K.\ Jain$	113

	• <i>Meloidogyne</i> species on vegetables and pulse crops	113
	• Rotylenchulus reniformis on vegetable and pulse crops	115
	• Anguina tritici on wheat	115
	• Heterodera avenae on wheat and barley	116
	• Heterodera cajani on pulse crops	117
	• Tylenchulus semipenetrans on citrus	117
	• Radopholus similis on coconut	118
	• Ditylenchus angustus on rice	118
Exercise 18.	Field trials on biocontrol agents for the management of phytonematodes — $R.K.\ Walia$	120
	Paecilomyces lilacinus	120
	Pasteuria penetrans	122
Exercise 19.	Crop rotation trials for management of plant parasitic nematodes — $R.S.\ Kanwar$	124
Exercise 20.	In vitro culturing of plant parasitic and fungivorus nematodes — $R.\ S.\ Kanwar$	127
	• In vitro culturing of plant parasitic nematodes	127
	o Callus tissue technique	127
	o Carrot disc technique	129
	 Excised root technique 	129
	• In vitro culturing of fungal feeding nematodes	130
Exercise 21.	Isolation and culturing of entomopathogenic nematodes — Harish K. Bajaj	134
	• Isolation and mass rearing of EPNs in vivo	134
	• Collection of adults of EPNs and studies on their life cycles	136
	Appendices	139
	Subject Index	142
