PREFACE

Thermodynamics is a core subject which has wider application in different disciplines of engineering science. Hence there is a legitimate demand for dependable textbook cum reference book on this subject. In my humble venture I have tried to present the difficult concepts of thermodynamics in a lucid language so that it becomes easier for learners to digest it and enable them to apply these principles in solving practical problems that would crop up when they are called upon to work in their respective fields.

In order to make the subject still easier for the students a large number of illustrative examples are included in the text. It is my hope that when students study the theory, see its application in examples, and perform similar analyses, they will be able to understand and apply principles of thermodynamics.

My publisher Shri Pawan Kumar deserves my thanks for making this publication possible in a record time.

I express my deep gratitude to my father late Professor B.K. Purohit (Structural Engineering), who tirelessly worked throughout his life as a true teacher, a simple man possessing insatiable thirst for knowledge.

R.K. PUROHIT

ENGINEERING THERMODYNAMICS

R.K. PUROHIT

About the Book

This book on Engineering Thermodynamics presents the principles and applications of the subject and covers the entire syllabus prescribed by various universities for undergraduate students.

Needless to emphasise, this new book has been designed as a self learning capsule. With this aim the material has been organised in a logical order with lots of illustrative examples to enable students to thoroughly master the subject.

Purohit, R.K. (b Dec. 1949) Graduated in Mechanical Engineering in 1973 and ME (Mechanical Engineering) in 1978. Served the Rajasthan Roadways as an Engineer Prior to joining the teaching profession at M.B.M. Engineering College, J.N.V. University, Jodhpur in 1976.

He is a life member of TSI, a member of ASME, ASCE, ASAE and Combustion Engineering. He has guided 51 Seminars and 58 Dissertations at post graduate level. At least 27 papers have been published in different National and International Journals. He has authored 10 books namely:

1. Fluid Mechanics and Fluid Machines co-author with Dr. M.L. Mathur Ex. Vice chancellor JNV University, (1982);
2. Thermal Engineering (1991, 2007);
3. Fundamentals of Fluid Mechanics (1996);
4. Gas Dynamics (1997);
5. Mechanical Engineering (2001);
6. Fluid Power Engineering (2002);
7. Foundation of Mechanical Engineering (2004);
8. Fundamentals of Mechanical Engineering (2005);
9. Material Science and Processes (2005) and
10. Hydraulic Machines (2007).

CONTENTS

1.	BASIC CONCEPTS RELATED TO THERMODYNAMICS	1
1.1	Introduction	1
1.2	Definition of Engineering Thermodynamics	1
1.3	Applications of Engineering Thermodynamics	1
1.4	Limitations of Engineering Thermodynamics	2
1.5	Basic Definitions	3
	1.5.1 System, Boundary and Surroundings	3
	1.5.2 Closed System	3
	1.5.3 Open System	3
	1.5.4 Control Volume and Control Surface	3
	1.5.5 Non-Flow and Flow Processes	3
	1.5.6 Isolated System	4
	1.5.7 Adiabatic System	4
1.6	Macroscopic and Microscopic	4
	1.6.1 Macroscopic System Analysis	4
	1.6.2 Microscopic System Analysis	5
1.7	Property, State, Process and Equilibrium	5
	1.7.1 Intensive and Extensive Properties	5
	1.7.2 Intrinsic and Extrinsic Properties	6
	1.7.3 State	6
	1.7.4 Equilibrium	6
	1.7.5 Thermodynamic Process	6
	1.7.6 Quasi-Static Process	7
	1.7.7 Reversible and Irreversible Processes	7
	1.7.8 Thermodynamic Cycle	8
	1.7.9 Point Function	8
	1.7.10 Path Function	8
	1.7.11 Phase and Pure Substance	9
1.8	Pressure	9
	1.8.1 Gauge Pressure	10
	1.8.2 Vacuum Pressure	10
	1.8.3 Manometer	10
	1.8.4 Barometer	10
	1.8.5 Analysis	11
1.9	Temperature Scales	11
	1.9.1 International Temperature Scale of 1990 (ITS-90)	12
1.10	Zeroth Law of Thermodynamics	13

1.11	Internal Energy	14
1.12	Enthalpy - A Combination Property	14
1.13	Gas and Vapour	15
1.14	The Ideal Gas Equation of State	15
1.15	Specific Heat	16
1.16	Relationship Between c_p and c_v	17
1.17	Molar Heats - Volumetric or Molecular	17
1.18	Variation in Specific Heat	17
1.19	Joule's Law	18
	Points to Note	18
	Exercises	19
	Theory	19
2.	WORK AND HEAT	20
2.1	Introduction	20
2.2	Definition of Work	20
2.3	Moving Boundary Work or Displacement Work of PdV Work :	21
	2.3.1 Work is A Path Function :	22
	2.3.2 Work in Various Quasi - Static Processes	23
2.4	Indicator Diagrams	24
2.5	Other Types of Work Transfer	25
2.6	Free Expansion Process or Non Equilibrium Work	28
2.7	Heat Transfer	29
2.8	Specific Heat and Latent Heat	30
2.9	Comparison of Work and Heat	31
	Illustrative Examples	32
	Exercises	47
	Theory	47
	Unsolved Problems	48
3.	THE FIRST LAW OF THERMODYNAMICS	51
3.1	Introduction	51
3.2	Joule's Experiment	51
3.3	First Law of Thermodynamics	52
3.4	Corollaries of First Law of Thermodynamics	52
	3.4.1 Corollary 1	52
	3.4.2 Corollary 2, Conservation of Energy	53
	3.4.3 Corollary 3, Perpetual Motion Machine of First Kind.	54
	3.4.4 Energy Balanced Examples	55
3.5	Reversible Non Flow Processes	56
	3.5.1 Constant Volume Process ($V = \text{Constant}$)	57
	3.5.2 Constant Pressure Process ($P = \text{Constant}$)	57
	3.5.3 Constant Temperature or Isothermal Process ($T = \text{Constant}$)	58
	3.5.4 Hyperbolic Process ($pv = c$)	59
	3.5.5 Adiabatic Process ($pv^\gamma = c$)	60
	3.5.6 Polytropic Process ($pv^n = c$)	61

Illustrative Examples	63
Exercises	81
Theory	81
Unsolved Problems	82
4. FIRST LAW APPLIED TO FLOW PROCESS	85
4.1 Introduction	85
4.2 Steady Flow Energy Equation (SFEE)	85
4.3 Flow Work	87
4.3.1 Work Done in A Flow Process	87
4.3.2 Non Flow Work Versus Flow Work	90
4.4 Application of The Steady Flow Energy Equation For Engineering Devices	90
4.5 Transient Flow Processes [Variable Flow Processes]	97
4.5.1 Tank Filling	98
4.5.2 Tank Discharge	99
4.6 Comparison of Steady Flow Energy Equation With Euler Equation and Bernoulli Equation	100
Illustrative Examples	101
Exercises	119
Theory	119
Unsolved Problems	119
5. THE SECOND LAW OF THERMODYNAMICS	121
5.1 Introduction	121
5.2 Limitations of First Law of Thermodynamics	121
5.3 Definitions and Terminology	122
5.4 The Second Law of Thermodynamics	123
5.4.1 Kelvin-Planck Statement	124
5.4.2 Clausius Statement	124
5.5 Perpetual Motion Machines	125
5.6 Equivalence of The Two Statements	125
5.6.1 Violation of Clausius Statement Leading to Violation of Kelvin-Planck Statement.	126
5.6.2 Violation of Kelvin-Planck Statement Leading to Violation of Clausius Statement.	126
5.7 Reversible and Irreversible Processes	127
5.7.1 Characteristics of Reversible and Irreversible Processes	127
5.7.2 Internal and External Reversibility	127
5.7.3 Examples of Reversible and Irreversible Processes	128
5.8 Reversible Cycles	129
5.9 Carnot Cycle	130
5.9.1 Limitations of Carnot Cycle	132
5.10 Reversed Carnot Cycle (Refrigerator and Heat Pump Cycle)	132
5.10.1 Relation Between Two COPS	133
5.10.2 Actual and Reversible Refrigerators	134
5.11 Carnot's Principle and the Thermodynamic Temperature Scale	124

5.11.1	The Carnot Principles	135
5.11.2	The Absolute Thermodynamic Temperature Scale	136
	Illustrative Examples	139
	Exercises	167
	Theory	167
	Unsolved Problem	168
6.	ENTROPY	170
6.1	Introduction	170
6.2	Inequality of Clausius	170
6.3	Entropy	172
6.4	The Entropy, A Thermodynamic Property	173
6.5	Increase of Entropy Principle	174
6.6	Entropy Generation	176
6.7	Third Law of Thermodynamics :	177
6.8	Equilibrium State :	177
6.9	Entropy Change of A Closed System	178
6.10	Entropy Change For an Open System	178
6.11	Combined First and Second Law (The Tds Equation)	179
6.12	Entropy as A Coordinate on Property Diagrams	180
6.13	Isentropic Process	182
	Illustrative Examples	183
	Exercises	212
	Theory	212
	Unsolved Problems	215
7.	AVAILABILITY AND IRREVERSIBILITY	217
7.1	Introduction	217
7.2	Available Energy	217
7.3	Availability in A Cycle Process	218
7.4	Maximum Work in A Reversible Process	220
7.4.1	Work Done in All Reversible Process is Same:	221
7.5	Evaluation of Maximum Work	221
7.5.1	Reversible Work for A Closed System	223
7.5.2	Reversible Work in A Steady Flow Process	223
7.6	Maximum Useful Work	224
7.7	Dead State	224
7.8	Availability	225
7.8.1	Availability in A Non Flow Process :	225
7.8.2	Availability in A Steady Flow Process :	226
7.9	Irreversibility	227
7.10	Gouy- Stodola Theorem	228
7.11	Availability or Energy Balance	228
7.11.1	Exergy Balance for A Closed System	229
7.11.2	Exergy Balance for A Steady Flow System	231
7.12	Second Law Efficiency or Effectiveness	232

Illustrative Examples	234
Exercises	255
Theory	255
Unsolved Problem	257
8. PROPERTIES OF PURE SUBSTANCE	259
8.1 Introduction	259
8.2 Phases and Phase Change of Pure Substances	259
8.3 P-V-T Relationship for Pure Substance	261
8.3.1 P-V Diagram for A Pure Substance	261
8.3.2 P-T Diagram for A Pure Substance	263
8.3.3 P-V-T Diagram	264
8.4 Charts In Common Use	266
8.4.1 T-S Diagram For A Pure Substance	266
8.4.2 H-S Diagram (Mollier Chart) for A Pure Substance	268
8.5. Dryness Fraction (Quality)	268
8.5.1 Degree of Superheat	269
8.6 Tables of Thermodynamic Properties	269
8.6.1 Interpolation and Double Interpolation	272
8.7 Thermodynamic Properties of Steam Calculation from First Principles	274
8.7.1 Internal Energy	274
8.7.2 Specific Volume	274
8.7.3 Enthalpy	275
8.7.4 Entropy	276
8.8 Reversible Non Flow Processes with Steam	277
8.8.1 Constant Volume Process ($V = C$)	277
8.8.2 Constant Pressure Process ($P = C$)	278
8.8.3 Constant Temperature or Isothermal Process ($T = C$)	279
8.8.4 The Hyperbolic Process ($pv = C$)	280
8.8.5 Polytropic Process ($pv^n = C$)	280
8.8.6 Adiabatic Process ($Q = 0$)	281
8.8.7 Throttling Process ($H = C$)	282
8.9 The Determination of Dryness Fraction	283
8.9.1 Separating Calorimeter	283
8.9.2 Throttling Calorimeter	284
8.9.3 The Combined Separating and Throttling Calorimeter	286
Points to Note	288
Illustrative Examples	290
Exercises	335
